

Facilities protection C2 system to manage the event and control on the combined forces from one central control

The system builds an accurate up-to-date situation picture from all sensors operating in the facility

The system provides tools to support decision-making processes, event management and control of involved forces

The system is based on of-the-shelf products (domestic and foreign), modular and open that connects to existing systems and available in a relatively short timetable

mPrest role in Facility Protection C2 system

mPrest led the architecture and development of the system.

This system serves as the main situation room Command & Control system.

The system incorporate mClient which provides easy configuration and mCore as the system objects management infrastructure.

The system was designed to be a long running system, handling hundreds of sensors using advanced data fusion engines
